Kemal Özyön

2nd-year CTIS student focusing on backend systems, AI agent architectures, and machine learning. Experienced in designing agentic flows and system integrations. Possess a strong mathematical foundation through coursework in calculus and linear algebra, with plans to expand expertise into probability and statistics. Currently focused on developing scalable backend systems, AI-powered applications.

Education and Qualifications

B.Sc. in Computer Technology and Information Systems (Full Sept 2023 - Jun 2028 Scholarship)

Bilkent University, Ankara

- GPA: 3.00 | Last Semester GPA: 3.55
- Ranked 3514th nationwide in YKS (Quantitative Track)
- Relevant Coursework: Data Structures, Algorithms, Frontend, Backend, Database Management Systems, Object-Oriented Programming, Linear Algebra, Calculus
- Focus Areas: Backend Systems, AI Agent Architectures, Machine Learning

Projects

Agentic AI Overview |

[github.com/kemalozyon/AgenticAIOverview](#) | *Python, LangGraph, Mem0, OpenAI API, uv*

- Engineered a comprehensive 10-module repository demonstrating the lifecycle of building agentic AI systems from scratch to voice-enabled agents.
- Implemented complex graph-based workflows using LangGraph and integrated persistent memory structures with Mem0.
- Optimized the development environment using the uv package manager for high-performance dependency management.

Bank Management System | [github.com/kemalozyon/JavaProject](#) | *Java, OOP, Java Swing*

- Developed a comprehensive, GUI-based bank management application utilizing core Object-Oriented Programming principles (Inheritance, Encapsulation, Polymorphism).
- Architected a modular system separating graphical interfaces from business logic, implementing robust user and account management (Checking vs. Savings).
- Managed complex data relationships and system states using Java Collections (ArrayList, HashSet), including secure transaction processing and interest calculations.

Demir Aslan - Digital Price Board | [github.com/kemalozyon/DemirAslan](#) |

Electron, Node.js, JavaScript, IPC, CSS3

- Built a cross-platform desktop application using Electron to manage and display real-time gold prices for retail stores.
- Implemented a dual-window setup, using Inter-Process Communication (IPC) to instantly sync data between a control panel and a full-screen digital display.
- Created a clean, responsive UI with custom CSS animations and dynamic light/dark themes using standard web technologies.
- Packaged the application into standalone Windows (.exe) and macOS (.app) executables using electron-builder for easy distribution.

Python Tools & Utilities

- YouTube Video Downloader | [github.com/kemalozyon/YouTubeVideoDownloader](#) | *Python*
- BackgroundDeleter | [github.com/kemalozyon/BackgroundDeleter](#) | *Python*
- QR Code Maker | [github.com/kemalozyon/QRCodeMaker](#) | *Python*

Skills

Programming Languages: * Python, Java, JavaScript, C, C++, SQL, HTML/CSS

Backend & Databases: * Node.js, Express.js, PostgreSQL, RESTful API Design

Frameworks & AI: LangGraph, Mem0, OpenAI API

Tools & DevOps: Docker, Git, GitHub, Linux, Neovim, uv

Core Concepts: * Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP)
